DEFENDER

ONION

FORTIFYING, YIELD AND QUALITY

FERTILIZER

IMPORTED FROM EU

DEFENSES

DEFENDER **ONION**
Activator of Natural Defenses

COMPOSITION

	%W/V
Total Nitrogen (N)	4,8
Ureic Nitrogen (N)	4,8
Zinc water-soluble complex (Zn)	1,0
Manganese water-soluble complex (Mn)	2,0
Copper water-soluble complex (Cu)	2,0

Density: 1,2

pH: 2,0

Complexing agents:

Aluminium Lignosulphonate and gluconic acids

DEFENDER ONION
Activator of Natural Defenses

YIELD

- Commercial sized onions
- Increased production (increase in weight and decrease in yield loss)
- Improvement in root development
- Greater vegetative growth. Greener leaves

QUALITY

- Better quality (increases the antioxidant potential) of dehydrated onion powder resulting in an increase in a phenolic compound called “Quercetin”
- Homogeneous layers.
- Improved calibre homogeneity.

PLANT HEALTH

- Due to its special properties, it exerts a triple preventive effect against trips:
 - Acts as a natural repellent, due to the increase of volatile Sulphur compounds in the onion itself.
 - Promotes speedy and better healing of the micro wounds caused by trips.
 - Thickening of cell walls, leading to thicker, more turgid leaves, making them more resistant to bites and physical deformation.
- Increases the polyphenol content in the plant, thus increasing the plant’s capacity to defend itself against pests and diseases.

APPLICATION TIMES, MODE AND DOSE

ONION

1st Foliar application: on plants with 4-6 leaves.

2 L/Ha.

2nd Foliar application: on plants with 8-12 leaves- Should coincide with the swelling of the bulbs.

2 L/Ha.
(Volume of culture medium: 500L/Ha.)
